Data Media Recovery Services

Data storage media is used for such a wide range of applications that they may occasionally get damaged in some fashion. The damage may range from something as minor as a cracked cartridge to tapes that have burned in a fire or run over by a truck. And while the damage may be minor, the data on the tape may be priceless. Midwest Computer Products' data media recovery services can help you recover lost data from virtually any type of magnetic tape media. Additionally, we can recover data from non-tape media such as: floppy, zip, CD or DVD. We are able to retrieve data from media damage caused by a variety of issues related to hardware, environmental hazards, user error, etc.

TAPE FORMATS SERVICED

- Mid-range DLTtape, Super DLTtape, LTO Ultrium cartridges
